

cbf\_rrt.CBFRRT.getNearestNode

rrt.RRT.getNearestNode

cbf\_rrt.CBFRRT.dist

```
graph LR; A[cbf_rrt.CBFRRT.getNearestNode] --> C[cbf_rrt.CBFRRT.dist]; B[rrt.RRT.getNearestNode] --> C;
```

The diagram illustrates a dependency or data flow. Two white rectangular boxes on the left represent functions: 'cbf\_rrt.CBFRRT.getNearestNode' (top) and 'rrt.RRT.getNearestNode' (bottom). Two blue arrows originate from the right side of these boxes and point towards a gray rectangular box on the right labeled 'cbf\_rrt.CBFRRT.dist'. This indicates that both functions provide input or data to the 'dist' variable.
